

Privacy Policy — SalvadApp

Last updated: September 1, 2026

Your privacy matters to us. This Privacy Policy explains how data is handled within **SalvadApp**.

1. What Information We Use and How We Protect It

No remote collection: this Application works entirely offline. The Developer does not own any remote servers, and does not collect, transmit, monitor, or store any personal user data (such as savings goals, amounts, dates, or notes you enter).

Local storage: all information you enter is saved exclusively within your device's local memory. The protection of this data depends entirely on the security measures (PIN, biometric data, phone encryption) you have configured on your own smartphone.

Biometric authentication: some features of the Application (for example, access to the data vault) may be protected using your device's biometric authentication (fingerprint, face recognition, or a PIN/pattern you have set). The Application does not collect, record, or have access to biometric data: the entire verification is handled by the Android operating system, which only communicates the outcome to the app (authentication succeeded or failed), without any transmission of the biometric data itself.

Encryption of saved IBANs: besides the biometric protection for access, every IBAN entered in the vault is encrypted before being saved on your device, using a security key generated and held directly by the Android operating system (Android Keystore), which never leaves the device and is neither accessible nor exportable by the Application itself.

Images on goal detail cards (optional feature): if you turn on the Images feature (Settings > Appearance) and choose to add a photo to a goal's detail card, the Application will ask you to pick it from your device's gallery or take it on the spot with the camera, using Android's own system features. Either way, the choice is always yours: the app never accesses the gallery or camera unless you explicitly start this action for this purpose. The selected image is copied and stored exclusively in your device's local memory, exactly like the app's other data: no image is ever uploaded, transmitted, or made accessible to the Developer in any way.

2. Notifications and Reminders

Local notifications: if you turn on notifications for a goal (Settings, or the dedicated toggle in the goal's detail screen, including the quick-access bell icon in the top bar), the Application schedules deadline and progress alerts on its own, using Android's own system features (AlarmManager), including the "Deposit reminder" for recurring plans. This scheduling happens entirely on your device: no information about your goals, amounts, or deadlines is transmitted to any external server or to the Developer to generate or manage these notifications.

Device restart: to make sure notifications already scheduled aren't lost if your phone is turned off or restarted, the Application requests the system permission "Receive at boot completed" (RECEIVE_BOOT_COMPLETED). This permission is used exclusively to automatically reschedule pending reminders right after a restart, without any collection or transmission of data.

You can turn off notifications at any time from Settings or from the individual goal's screen, without losing any of your existing data.

3. Sharing Data with Third Parties

Since we do not collect any data, there is no sharing or sale of information to third parties.

If you choose to use the app's backup features and later export or share the generated file (for example, on Google Drive), the data will be transferred directly from your phone to the cloud provider you chose, with no involvement or oversight on our part. We encourage you to review your cloud provider's own privacy policy.

Backups and the IBAN vault: the "Export" feature (Settings > Backup) includes, if present, the IBANs saved in the vault as well — unlike on the device, where they remain encrypted, in the exported backup file they are stored in plain text, so they can be imported on another phone as well. The Application explicitly warns you about this before proceeding. The daily automatic backup and the "Backup now" feature, on the other hand, never include saved IBANs, precisely to limit exposure of this more sensitive data in saves that happen without you explicitly choosing a destination.

If you have added one or more images to your goals' detail cards (see section 1), these are included in the backup file together with the rest of your data, and follow the same rule: they stay on your device alone until you choose to export or share the file elsewhere.

4. Technical Diagnostics Service (Firebase Crashlytics)

To identify and fix technical issues, the Application uses Firebase Crashlytics, a diagnostics service provided by Google LLC. In the event of a crash or unexpected error, this service automatically collects strictly technical information about the app's behavior — not your identity: device model and Android OS version, the installed app version, a technical installation identifier (used solely to group multiple crash reports coming from the same device over time, with no link to your personal identity), and the technical logs (stack trace) needed to identify the cause of the error.

They never include your savings goals, amounts, transactions, notes, IBAN vault data, or any other personal or financial information you enter in the app, which always remains solely on your device as described in Section 1. This service is not used for profiling, advertising, or tracking usage behavior: its only purpose is to help us improve the app's stability.

This technical data is automatically deleted within 90 days of collection.

For more information on how Google, as service provider, handles this data, see:
<https://firebase.google.com/support/privacy>

This feature is off by default: this technical data is only collected if you knowingly turn it on from Settings > Support > "Help us improve" in the app, and you can turn it off again at any time from the same place.

5. Free of Charge and Future Features

The Application is entirely free of charge and does not include any in-app purchase, subscription, or form of payment. We do not interface with any billing system from Google Play, Huawei AppGallery, or other stores to process payments.

The Developer reserves the right to introduce paid features and/or advertising content within the Application in the future. Should this happen, this Privacy Policy will be updated in advance with a dedicated section describing in detail the data processed, the third-party providers involved (for example advertising networks or store billing systems), and the related purposes, in accordance with the GDPR and the policies of the relevant distribution stores.

6. Children's Online Privacy Compliance

The Application is not directed at individuals under 14 years of age. We do not knowingly collect any information from minors. If a parent or legal guardian becomes aware that a minor has entered data on their device and wishes to delete it, simply uninstalling the Application or clearing the app's data from the device settings is sufficient.

7. Your Consent and Changes to This Privacy Policy

By using the Application, you consent to the practices described in this policy. The Developer reserves the right to modify this Privacy Policy at any time (for example, if online features are added in the future). Any changes will be published in this section or within the app, with an updated revision date.

Nature of the project: SalvadApp is developed and maintained as an independent personal project, offered free of charge on a non-professional basis. The Developer reserves the right to modify, limit, or remove at any time individual app features that are not strictly necessary to its core purpose (for example, but not limited to, the optional Images feature), should their maintenance become excessively burdensome or require effort disproportionate to the hobby nature of the project. The Developer also reserves the right to pause updates, withdraw the Application from digital stores, or discontinue its development at any time and without prior notice. Since the Application works entirely offline (Section 1), withdrawing it from stores or discontinuing development does not remove the app or delete data already present on users' devices: it will continue to function normally on the device, except for the availability of future updates. Subject to the above and always in compliance with applicable law, the Developer reserves the right to modify the Application, its functioning, and its features at its own discretion, at any time.

8. Contact Us

If you have questions, concerns, or requests for clarification about this policy or how the app works, you can reach us at: **sviluppo.app.am@gmail.com**, or visit our website:
